

Additional information

- When broadcasting on free platforms like YouTube, Facebook and other social media, there are restrictions on some published content, so we would advise avoiding previously uploaded or published content (music and video).
- We can customise your virtual event using applications like PowerPoint, combining iPads and including logos, graphic designs and videos.
- It is possible for your audience to interact directly with you or your team or the presenter during your live virtual event.
- To achieve the highest quality live streaming we need a good and reliable internet connection. In some cases, the live stream may temporarily stop playing due to network traffic or connectivity issues. Make sure you wait a few minutes and then retry starting the live stream or refreshing your page. It is crucial for us to know the broadband speed in order to have a seamless virtual event. Worst case scenario, we are able to record to the camera and offer the event as an on demand video.
